

**Why Choose R.W. Martin?**

Since the 1980s R.W. Martin has been the leader in laundry machinery remanufacturing, while continually providing innovative solutions for the industry. Unlike other so-called rebuilders who offer one or two services, R.W. Martin is a full-service provider for all of your machine improvement needs. Check out our website, or call an R.W. Martin account manager.

*Here is a partial list of the brands of machinery that we service, repair, and remanufacture:*

|           |              |           |
|-----------|--------------|-----------|
| American  | Ellis        | Leonard   |
| Braun     | Energenics   | Milnor    |
| Brim      | Gardner      | Norman    |
| Challenge | Huebsch      | T.E.A.    |
| Chicago   | Jensen       | Twin City |
| Cissell   | Kannegiesser | Unimac    |
| C.L.M.    | Kemco        | Washex    |
| Colmac    | Lavatec      |           |

R.W. Martin

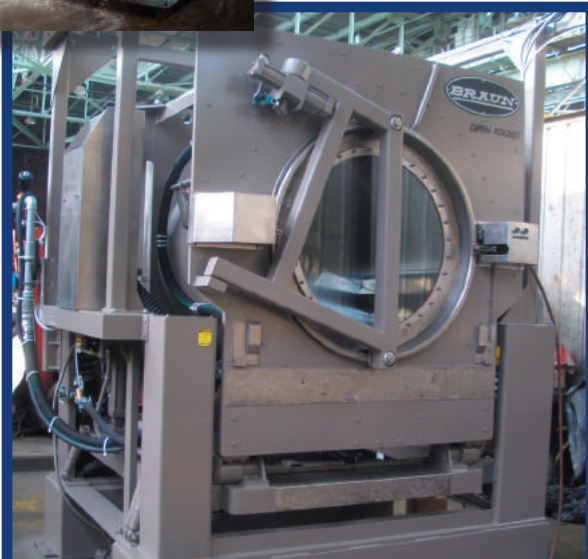

# MACHINERY REMANUFACTURING

## Full Service Rebuilding Shop Serves Industry

R.W. Martin provides remanufacturing services for many types of plant equipment and machinery components in the industrial laundry and process industries. Our extensive range of equipment and experienced personnel enable us to return virtually any late-model machine or component to its original specifications, from washer extractors, dryers, feeders, flatwork ironers, and both large and small-piece folders, to industrial water heaters, pump sets, and water storage tanks.

Ask us about our  
rebuild exchange  
program.

## Increased Productivity, Quality and Profitability

*For a Fraction of the Cost of New Machinery*

Remanufacturing works because the only portions of machines that are repaired or replaced are those that have been worn out or become obsolete: the wear parts, wiring, hydraulics, pneumatics and controls in particular. The basic machine structure is reconditioned and re-used, resulting in reduced costs for our customers.

## It's Win-Win

R.W. Martin skillfully integrates the smooth operation, control and reliability of contemporary technology with the strength and sturdiness of older late-model machines. Consequently, owner-operators can anticipate life expectancy and performance from their remanufactured machine to be equal to that of a new machine.

## The Results of Martin Remanufacturing

*Your laundry machines can operate like new again, or even better, and provide you with higher production rates and reduced costs.*

**Only Martin Remanufacturing delivers benefits like these:**

1. Increased production through shorter cycle times
2. Higher quality parts on a more consistent basis
3. Improved performance, greater versatility
4. Fewer repairs means lower operating costs and less downtime
5. Lower processing costs due to more consistent quality
6. Updating equipment to meet ANSI and OSHA regulations
7. Improved work environment and higher employee morale

## Our Remanufacturing Process

*Simply stated, the R.W. Martin remanufacturing process is comprehensive and easy.*

- A Martin technician thoroughly examines your machine, then provides a written proposal for the remanufacture.
- The machine is dismantled in our shop to determine the condition of its components, then cleaned and made free from rust and corrosion.
- All assemblies and components are inspected for wear. All missing, defective, broken or substantially worn parts are either restored to sound condition or are replaced with new or remanufactured parts as required.
- Prior to reassembly, all individual components are painted. This assures proper refinishing under all items fastened to the machine, and that new parts installed are not being painted over in the process (you specify paint color).
- After reassembly and/or updating of controls, all current safety labeling and guard requirements are added.
- The machine is then test-run to ensure optimum performance.
- Upon receipt of your remanufactured machine, a Martin service representative is available to supervise on-site start up and machine operation.
- Full documentation of the project is provided for your files. All R.W. Martin remanufactured machines come with a limited warranty tailored to your specific needs.

## Remanufacturing vs. Buying New

*Since purchasing new machinery can be cost-prohibitive, remanufacturing your late-model machinery makes more sense than ever.*

**Consider the benefits of R.W. Martin remanufacturing:**

1. Lower initial cost (a fraction of the cost of a new machine)
2. Production capabilities comparable to new machines
3. Less installation time and costs due to the reuse of existing foundations, plumbing and electrical connections
4. Employees are already familiar with machines, so less set-up and troubleshooting
5. Faster delivery than many new machines – shorter payback period
6. Ability to support machinery with already existing spare parts
