

TAKE CONTROL OF YOUR SCRUB INVENTORY

Scrub losses have become significant in the healthcare field over the last few years. Building internal systems to manage scrub inventories means allocating expensive space, personnel, and resources.

There is a simpler solution...

A complete scrub-management system utilizing RFID technology, scrub dispensing and receiving machines, and software that puts real-time inventory data at your fingertips.

The R.W. Martin Co. and ABG Systems provide scrub-management system solutions using RFID-based scrub management to healthcare laundries in the U.S.

ABG is an established leader in RFID-based textile management systems in Europe, with more than 700 installations across 23 countries. And R.W. Martin has been serving the needs of the commercial laundry industry for more than five decades.

Together, R.W. Martin and ABG will custom design a unique scrub-management solution for you.

RFID ELIMINATES THE UNKNOWNNS

RFID technology is the most reliable and efficient way to track garments as they move through every stage of their usage cycle.

Simple barcoding is a limited solution, as it depends on line-of-sight scanning. This limitation creates production bottlenecks that adversely affect efficiency and productivity.

A properly designed RFID-based system enables hospitals and laundries to process items in bulk, thus greatly reducing processing time.

Once an RFID tag is added to a textile, it now has a unique and trackable identity, allowing you to monitor its progress through each stage of its use cycle in real time.

RFID tags can be sewn into garments or take the form of visible labels that can be branded with your company's logo.

GET REAL-TIME MONITORING WITH INTELLIGENT SOFTWARE

Another essential part of an effective scrub-management system is customized software.

ABG's unique ONE Software puts you in control of your scrub inventory. ONE enables you to see the real-time status of any one item and access its entire usage history.

With ONE, restocking staff won't be caught off guard and employees won't be stuck waiting for scrubs. The software's dashboard enables you to monitor inventory levels in every scrub-dispensing machine—including the quantity of each type of item (e.g., scrub tops and scrub bottoms) present.

A key feature unique to the ONE Software is its "learn" capability, which analyzes the usage at each dispensing station and provides suggested inventory for each location. It will inform you how many of each item must be replenished to bring each machine up to its optimal inventory level. In addition, ONE can generate customized reports thanks to a user-friendly interface that will let you easily export data.

SAVE TIME AND REDUCE CROSS CONTAMINATION WITH AUTOMATED SCRUB DISPENSERS

A true scrub management system is not only comprehensive—it's also versatile. R.W. Martin and ABG offer several automated scrub dispensing machines, each with a variety of sizes and configurations to best meet the specific needs of different institutions, while minimizing scrub losses.

All our scrub dispenser models utilize RFID technology to facilitate inventory management, minimize scrub loss, and reduce the potential for cross-contamination.

Each scrub dispenser can only be accessed by authorized staff members via a badge or code. This ensures that scrubs are associated with the employee to whom they were issued until those scrubs are returned.

Because ABG's scrub dispensers are fully automated, it takes just seconds for an employee to request and receive their desired scrubs. Loading each machine is a quick and efficient process as well, dramatically reducing handling time.

CHOOSE R.W. MARTIN

Time to solve your scrub loss problem! Contact R.W. Martin at 800.635.4363 or at info@rwmartin.com.

SCAN HERE TO LEARN MORE AND REQUEST A QUOTE.

White C Scrub Dispenser

- Garments stay separate & sterile until dispensed
- Holds up to 400 sets / 800 items
- Average dispensing time < 5 seconds

White Box Scrub Dispenser

- Flexible, modular, locker-style dispenser
- Modules can have between 1 & 6 doors
- Each module can be configured for shelves or hangers

White Basket Scrub Collector

- Centralizes the collection of returned scrubs
- Reduces staff handling of soiled garments
- Scrub collection time < 2 seconds
